AIMS Xpress Lite is a fully hosted version of our flagship courier product which includes the web site for customers to book and track their consignments online. The only difference between this and the main Xpress product is that it's limited to 2 back end users and doesn't have the 'Accounts' tab with the Sales and Supplier's invoicing functionality. Combined with the 30 day notice period this product helps make your decision painless when choosing a new on-line system for your customers in 2010.

Our fully Hosted solutions are delivered using Windows Server 2008 RemoteApp and simply require that you have a broadband connection and are running Windows XP SP3 or higher with MS Remote Desktop 6.1. These systems come in three different builds which scale up according to the number of users on the system. Bronze for 2-4 users, Silver for 5-9 users and Gold for 10-15 users. For larger systems please ask for details.

Bronze	512 MB memory	20 Gb HDD
Silver	1 Gb memory	50 Gb HDD
Gold	2 Gb memory	100 Gb HDD

To complement this solution we can supply you with a broadband router that has the ability to automatically fail-over to a second ISP's connection for un-interrupted internet connectivity - please ask for details.

This solution is very popular with companies who are used to running their own servers and will always be faster across your LAN but will raise other issues for remote working and is not so attractive for new start-up companies.

To complement this solution we also offer a nightly offsite backup service to our data centre which can then be restored onto one of our Hot Standby Servers in the event of a disaster. Prices start at £45.00 per month - please ask for details.
